

## **New OMAL Server**

Our old server is full so we now have a new one known as OMAL-SHARE1. You can map this drive on your computer. No need to go to an internet address and download your files from there. Just map the drive then you can drag and drop your folders to your desk top or just open your files directly from the server.

Please put your data into a folder with your name on it under the folder of the microscope you used to acquire the images. Do not create an individual folder for yourself on this server.

The new xnat is:

<\\xnat-abcc.ncifcrf.gov\OMAL-SHARE1>

The login information is the same as the old xnat:

login name: reddyg

password: reddyg0415

When you go into OMAL-SHARE1 you will see folders for the various fluorescence microscopes. Users should, but are not forced to, put their images under the appropriate microscope name. I will try to keep a little space available on the old xnat (OMAL-SHARE) so that users can keep images from the same projects together. it for Macs.

If you are using a Mac:

1. Open FINDER. Press Command (the Apple key) + K (this will open the option to map a drive.
2. The xnat will be " <smb://xnat-abcc.ncifcrf.gov/OMAL-SHARE1>
3. The login info will not be our personal info but the same login info you already provided

Essentially the only difference is Macs use "/" instead of "\"
